

CORNWELL SOLAR PEORIA COUNTY, ILLINOIS

The Cornwell Solar facility is located on over 250 acres of land near Princeville in Peoria County, Illinois. The project will contribute to strengthening Illinois' energy portfolio by providing reliable, locally generated solar power while supporting long-term grid resilience.

JOB CREATION

Cornwell Solar's construction timeline will support approximately 130 workers during peak construction activity and create several full time jobs post-construction. Once operational, the facility will create long-term operations and maintenance jobs while supporting the local economy through ongoing investment.

COMMUNITY IMPACT & LAND STEWARDSHIP

At Sol Systems, our mission goes beyond generating renewable energy —we're committed to creating lasting, positive change in the communities we serve. By prioritizing sustainability and social impact, we invest in initiatives that not only accelerate the transition to clean energy but also empower local communities through education, workforce development, and resilience programs. We're also restoring habitats and creating pollinator habitats on the site, reflecting our commitment to land stewardship and honoring the community's strong ties to agriculture.

LASTING REVENUE

Over its operational life, the Cornwell Solar facility will generate millions of dollars in property tax revenue, directly benefiting local communities and strengthening public services in the region.

HARNESSING THE SUN

The 35 MWac facility will produce enough clean energy to power about 7,000 homes annually. At the end of its life, the facility will be responsibly decommissioned, with materials reused or recycled where possible, returning the land to its natural state.
